➤ Reusability	59

Chapter 1: Identification of key stakeholders and End-Users:

In this chapter we identify all persons who have an interest in the successful implementation of the system either they are inside or outside the organization. Stakeholders are consisting of 3 types: -

a. **Internal-Operational:**

persons within the organization and regularly interact with the system.

- **Doctor** is the person who examines and diagnoses the patient's condition, determines the optimal treatment, and follows up on his condition and treatment results. He also performs first aid for patients and injured people. He also trains and directs instructions to the nursing staff.
- **Analytics specialist** is the person who receives various samples of blood and other body fluids, marking and sorting and classifying blood samples. he also organizes and stores all chemicals, liquids and compressed gases in accordance with safety instructions. Designs and implements laboratory tests according to standard procedures and takes explanatory notes on the results. He also presents the results of tests and medical examinations to patients and providing specialized doctors with the necessary knowledge for treatment, taking into account the confidentiality of medical laboratory information related to patients.

- **Radiology doctor** is the person who makes sure that the x-ray examination is requested from the treating doctor and determines what part to be photographed and what conditions are required. He also informs patients or department nurses of all the necessary instructions for any examination, such as attending the patient without breakfast or taking a specific tablet. He also adjusts the x-ray tube and determines the x-ray package and the necessary imaging factors. For each patient's required situation, he chooses the appropriate film size and quality for each examination, puts the patient's letter and identification number on the clipboard, and prints the patient's name and examination date on the film, if possible, and his technical number, or write that on the x-ray film. He also develops the films from him or from other radiology assistants according to the order of the work schedule in the radiology department, prepares the chemicals for acidification and daily and periodic cleaning of the acidifying device, and then delivers the x-rays to the patient.
- **Accountant** is the person who Follow up the financial procedures of patients, whether cash payment patients or receivable patients, collecting them, settling the fund, and following up on closing outstanding bills. He also restricts cash payment patients' bills on the system, collects cash from cash payment patients, restricts health insurance patients' bills on the system, follows up on cash payment patients' bills, and follows up pending bills with doctors and administration. Also, organizes the patient's file upon discharge from the hospital and completes financial exit procedures. Also send invoices to public accounting and accounting insurance companies. Also participate in the annual or periodic inventory work in the hospital.
- **Pharmacist** is the person who Dispensing the patient's medication via the doctor's prescription only, as well as dispensing the medication through the health insurance. Educating the patient about the side effects of the drug, writing insurance forms, and communicating with insurance companies to verify that patients get the drugs they want. Also answer patients' inquiries about prescriptions for medicines. Also, organize the pharmacy and its medications in an effective and organized manner, and continuously monitor the expiration dates of the medications. Also, follow-up invoices for purchases and sales of medicines and medical supplies as well. Follow the correct means of storing medicines and try as much as possible to prevent problems of poor storage.
- **Administrator** He is the person responsible for the administrative things in the hospital such as organizing departments, appointing employees, adding departments and things like that.

b. External-Operational:

persons outside the organization and regularly interact with the system.

- **Patients** They are the clients who come to the hospital in order to receive the services they request.
- **Pharmaceutical suppliers** They are the people who supply all medicines to the hospital pharmacy as well as all medical supplies.

c. Internal-Executive:

persons within the organization and don't directly interact, but use the information or have financial interest.

- **hospital managers** They are the people who have financial interests and who take the highest decisions in the management of the hospital and follow up on all activities in the hospital.

Chapter 2: Requirement Elicitation:

In this chapter we capture and collect all requirements of stakeholders and end-users identified in chapter1.

❖ **Modules:**

The system comprises of **8** major modules with their sub-modules as follows:

1. Administrator:

- Login:** Admin can login to his personal account.
- View/Edit Profile:** Admin can see and edit his profile.
- Add/View/Delete Doctor:** Admin can Add, view doctor, or delete him from system.
- Add/View/Delete Patient:** Admin can Add, view patient, or delete him from system.
- Add/View/Delete Pharmacist:** Admin can Add, view pharmacist, or delete him from system.
- Add/View/Delete Analytics Specialist:** Admin can Add, view analytics specialist, or delete him from system.

- g. **Add/View/Delete Radiology Doctor:** Admin can Add, view radiology doctor, or delete him from system.
- h. **Add/View/Delete Accountant:** Admin can Add, view accountant, or delete him from system.
- i. **Accept/Reject Join Request:** Admin can accept or reject doctor join request from database.
- j. **Add/View/Update/Delete Specialization:** Admin can Add, view specialization, or update its information, or delete it from system.
- k. **Add/View/Update/Delete Ambulance:** Admin can Add, view ambulance, or update its information, or delete it from system.
- l. **Add/View/Update/Delete Insurance:** Admin can Add, view insurance, or update its information, or delete it from system.
- m. **View Appointments:** Admin can see all appointments detail from database.
- n. **View Medicines:** Admin can see all medicines detail from database.
- o. **View Medical Analysis:** Admin can see all medical analysis detail from database.
- p. **View X-Rays:** Admin can see all X-Rays detail from database.
- q. **View Invoices:** Admin can see all invoices detail from database.

2. Hospital Manager:

- a. **Login:** Hospital Manager can login to his personal account.
- b. **View/Edit Profile:** Hospital Manager can see and edit his profile.
- c. **Add/View/Update/Delete Administrator:** Hospital Manager can add, view administrator, or update his information, or delete him from system.
- d. **Add/View/Update/Delete Role:** Hospital Manager can add, view User Role, or update user's role, or delete this role from user.

3. Doctor:

- a. **Login:** Doctor can login to his personal account.
- b. **View/Edit Profile:** Doctor can see and edit his profile.
- c. **Request to Join Hospital:** Doctor can Request to join hospital team through 'Join Us' form from UI.
- d. **Diagnose patients:** Doctor can diagnose patients or transfer patient to radiology/analysis department when needed.
- e. **Create Patient Prescription:** Doctor can create patient prescription after diagnosing him.
- f. **Add/View/Update/Delete Service:** Doctor can Add, view services he will do, or update them, or delete them from system.
- g. **View Patient history:** Doctor can view patient history from dashboard.

- h. **Add/view/update/delete Appointments:** Doctor can Add, view appointments dates he will make, or update them, or delete them from system.

4. Pharmacist:

- a. **Login:** Pharmacist can login to his personal account.
- b. **View/Edit Profile:** Pharmacist can see and edit his profile.
- c. **Add/View/Update/Delete Medicine:** Pharmacist can Add, view medicine, or update its information, or delete it from system.

5. Analytics specialist:

- a. **Login:** Analytics Specialist can login to his personal account.
- b. **View/Edit Profile:** Analytics Specialist can see and edit his profile.
- c. **Upload medical analysis:** Analytics Specialist can upload medical analysis through dashboard.

6. Radiology doctor:

- a. **Login:** Radiology Doctor can login to his personal account.
- b. **View/Edit Profile:** Radiology Doctor can see and edit his profile.
- c. **Upload X-Rays:** Radiology Doctor can upload X-Rays through dashboard.
- d. **Use pneumonia detection service:** Radiology Doctor can upload patient's X-Ray to predict pneumonia.

7. Accountant:

- a. **Login:** Accountant can login to his personal account.
- b. **View/Edit Profile:** Accountant can see and edit his profile.
- c. **Add/View Invoice:** Accountant can add new invoice, or view its details.

8. Patient:

- a. **Login:** Patient can login to his personal account.
- b. **Register:** Patient can register to the system for the first time.
- c. **View/Edit Profile:** Patient can see and edit his profile.
- d. **Book a doctor:** Patient can make an appointment with doctor based on his services.
- e. **Use Medical Insurance:** Patient can use his medical insurance when dispensing a medicine.

- f. **Talk to Chatbot:** Patient can talk to a chatbot to guide him where to go.
- g. **View Medicines:** Patient can see all medicines detail to buy them online.
- h. **Buy Medicines:** Patient can buy medicines using digital wallet or cash on delivery.
- i. **Call Emergency:** Patient can call emergency services using phone number.
- j. **View Doctors:** Patient can see all doctors detail to book an appointment.
- k. **View Specializations:** Patient can see all specializations detail to reach doctors in specific specialization.

❖ **Advantages required from the system:**

- **Validation:** usage of validation and regex when logging into the system and registering for the first time.
- **Verification:** Email verification will be sent to patient when registered.
- **Roles & Permissions:** Each user has his own permission so based on user permission he can does any modification on specified tables in the database (insert, delete, update, etc.).
- **Response Time:** The system provides a fast acknowledgment.
- **User-Interface:** The user interface acknowledges fast as we are using single page application.
- **Back-Up:** The system offers efficiency for data backup.
- **System Tracking:** The system will track every mistake as well as keep a log of it.
- **Availability:** The system is available all the time.
- **Support Multilingual:** The system supports two languages (Arabic and English).
- **Support Multitenancy:** Instead of forcing you to change how you write your code, the system by default bootstraps tenancy automatically, in the background. Database connections are switched, caches are separated, file systems are prefixed.

Chapter 3: Requirement Specification:

In this chapter, we categorize requirements and group them to avoid confusion. We divided them into **2** categories:

a. Functional Requirements:

They describe what the system/software must do; functionality or services (a function is a useful capability provided by one or more components of a system). Therefore, they specify an action that a system must be able to perform.

➤ **Login Function: -**

- **Function:**
Login
- **Actors:**
Administrator, Hospital Manager, Doctor, Pharmacist, Analytics Specialist, Radiology doctor, Accountant, Patient
- **Priority:**
High
- **Description:**
When the actor login, he can manage the system based on his roles.
- **Inputs:**
The actor should write the email and password in the right way and correct data for a successful login
- **Outputs:**
The actor can manage many functions based on roles that assign to him
- **Requirements:**
Write the right data to can login
- **Pre-condition:**
The actor already has an account
- **Post-condition:**
The actor entered his account successfully

➤ **View Profile: -**

- **Function:**
View profile
- **Actors:**
Administrator, Hospital Manager, Doctor, Pharmacist, Analytics Specialist, Radiology doctor, Accountant, Patient
- **Priority:**
Medium
- **Description:**
An actor profile is a collection of settings and information associated with a user. It contains critical information that is used to identify an individual, such as their name, age, profile picture, email, and password
- **Inputs:**
His account must be verified on the site after logging in.

- **Outputs:**
View personal information successfully.
- **Requirements:**
Actor information must be added by logging in to the site before viewing his profile.
- **Pre-condition:**
The actor must be logged in to the system and has permission.
- **Post-condition:**
The actor can view this profile.

➤ **Edit Profile: -**

- **Function:**
Edit profile
- **Actors:**
Administrator, Hospital Manager, Doctor, Pharmacist, Analytics Specialist, Radiology doctor, Accountant, Patient
- **Priority:**
High
- **Description:**
An actor profile is a collection of settings and information associated with a user. It contains critical information that is used to identify an individual, such as their name, age, profile picture, email, and password, and can edit this information based on this role
- **Inputs:**
His account must be verified on the site after logging in.
- **Outputs:**
edit personal information successfully.
- **Requirements:**
Actor information must be added by logging in to the site before viewing his profile.
- **Pre-condition:**
The actor must be logged in to the system and has permission.
- **Post-condition:**
The actor can edit this profile.

➤ **Add Doctor: -**

- **Function:**
Add Doctor

- **Actors:**
Administrator
- **Priority:**
High
- **Description:**
When the administrator login, he can add the Doctor to the website database and give him an account to make the doctor can do many functions
- **Inputs:**
Admin should write first name, last name, age, id, username, and password in the right way and correct data to add successfully;
- **Outputs:**
The administrator adds doctors to the system and makes accounts for the doctors and gives them some permeations.
- **Requirements:**
The data about a required doctor will be added.
- **Pre-condition:**
The administrator had signed in to his profile (system), has permeation and the doctor give his data to the administrator
- **Post-condition:**
The doctor is added and has an account.

➤ **View Doctor: -**

- **Function:**
View Doctor
- **Actors:**
Administrator
- **Priority:**
Medium
- **Description:**
When the administrator login, he can add the Doctor to the website database and give him an account to make the doctor can do many functions, and he can view doctor details like "see his appointments, personal information, and the number of patients who have examined him."
- **Inputs:**
Admin should write first name, last name, age, id, username, and password in the right way and correct data to add successfully; can view the details by clicking "view info".
- **Outputs:**

The administrator adds doctors to the system and makes accounts for the doctors and gives them some permissions, views doctors' details from the system.

- **Requirements:**

The data about a required doctor will be added.

- **Pre-condition:**

The administrator had signed in to his profile (system), has permission and the doctor give his data to the administrator

- **Post-condition:**

The administrator views details about all the doctors.

➤ **Delete Doctor: -**

- **Function:**

Delete Doctor

- **Actors:**

Administrator

- **Priority:**

High

- **Description:**

When the administrator login, he can add the Doctor to the website database and give him an account to make the doctor can do many functions, and he can delete the doctor.

- **Inputs:**

Admin should write first name, last name, age, id, username, and password in the right way and correct data to add successfully, and can delete the doctor by clicking "delete doctor"

- **Outputs:**

The administrator adds doctors to the system and makes accounts for the doctors and gives them some permissions, and can delete doctors' details from the system

- **Requirements:**

The data about a required doctor will be added.

- **Pre-condition:**

The administrator had signed in to his profile (system), has permission and the doctor give his data to the administrator

- **Post-condition:**

The administrator deletes all the doctors.

➤ **Add Patient: -**

- **Function:**
Add Patient
- **Actors:**
Administrator
- **Priority:**
High
- **Description:**
When the administrator login, he can add the patient to the website database and give him an account to make the patient can do many functions.
- **Inputs:**
Admin should write first name, last name, age, id, username, and password in the right way and correct data to add successfully;
- **Outputs:**
The administrator adds patients to the system and makes accounts for the patients and gives them some permeations.
- **Requirements:**
The data about a required patient will be added.
- **Pre-condition:**
The administrator had signed in to his profile (system), has permeation and the patient give his data to the administrator
- **Post-condition:**
The patient is added and has an account.

➤ **View Patient: -**

- **Function:**
View Patient
- **Actors:**
Administrator
- **Priority:**
Medium
- **Description:**
When the administrator login, he can add the patient to the website database and give him an account to make the patient can do many functions, and he can view patient details like " Viewing the dates he booked, personal information".

- **Inputs:**
Admin should write first name, last name, age, id, username, and password in the right way and correct data to add successfully; can view the details by clicking “view info”.
- **Outputs:**
The administrator adds patients to the system and makes accounts for the patients and gives them some permissions, views patients’ details from the system.
- **Requirements:**
The data about a required patient will be added.
- **Pre-condition:**
The administrator had signed in to his profile (system), has permission and the patient give his data to the administrator
- **Post-condition:**
The administrator views details about all the patients.

➤ **Delete Patient: -**

- **Function:**
Delete Patient
- **Actors:**
Administrator
- **Priority:**
High
- **Description:**
When the administrator login, he can add the patient to the website database and give him an account to make the patient can do many functions, and he can delete the patient.
- **Inputs:**
Admin should write first name, last name, age, id, username, and password in the right way and correct data to add successfully, and can delete the patient by clicking “delete patient”
- **Outputs:**
The administrator adds patients to the system and makes accounts for the patients and gives them some permissions, and deletes patients’ details from the system
- **Requirements:**
The data about a required patient will be added.
- **Pre-condition:**

The administrator had signed in to his profile (system), has permeation and the patient give his data to the administrator.

- **Post-condition:**

The administrator deletes all the patients.

➤ **Add Analytics Specialist: -**

- **Function:**

Add Analytics Specialist

- **Actors:**

Administrator

- **Priority:**

High

- **Description:**

When the administrator login, he can add the analytics specialist to the website database and give him an account to make the analytics specialist can do many functions.

- **Inputs:**

Admin should write first name, last name, age, id, username, and password in the right way and correct data to add successfully;

- **Outputs:**

The administrator adds analytics specialists to the system and makes accounts for the analytics specialists and gives them some permeations.

- **Requirements:**

The data about a required analytics specialist will be added.

- **Pre-condition:**

The administrator had signed in to his profile (system), has permeation and the analytics specialists give his data to the administrator

- **Post-condition:**

The analytics specialist is added and has an account.

➤ **View Analytics Specialists: -**

- **Function:**

View analytics specialists

- **Actors:**

Administrator

- **Priority:**

Medium

- **Description:**
When the administrator login, he can add the analytics specialist to the website database and give him an account to make the analytics specialist can do many functions, and he can view analytics specialist details like " Viewing the personal information".
- **Inputs:**
Admin should write first name, last name, age, id, username, and password in the right way and correct data to add successfully; can view the details by clicking "view info".
- **Outputs:**
The administrator adds an analytics specialist to the system and makes accounts for the analytics specialists and gives them some permissions, views analytics specialist details from the system.
- **Requirements:**
The data about a required analytics specialist will be added.
- **Pre-condition:**
The administrator had signed in to his profile (system), has permission and the analytics specialist give his data to the administrator
- **Post-condition:**
The administrator views details about all the analytics specialists.

➤ **Delete Analytics Specialist: -**

- **Function:**
Delete analytics specialist
- **Actors:**
Administrator
- **Priority:**
High
- **Description:**
When the administrator login, he can add the analytics specialist to the website database and give him an account to make the analytics specialist can do many functions, and he can delete the analytics specialist.
- **Inputs:**
Admin should write first name, last name, age, id, username, and password in the right way and correct data to add successfully, and can delete the analytics specialist by clicking "delete pharmacist"
- **Outputs:**

The administrator adds analytics specialists to the system and makes accounts for the analytics specialists and gives them some permissions, and deletes the analytics specialist's details from the system

- **Requirements:**

The data about a required analytics specialist will be added.

- **Pre-condition:**

The administrator had signed in to his profile (system), has permission and the analytics specialist give his data to the administrator

- **Post-condition:**

The administrator deletes all the analytics specialists.

➤ **Add Pharmacist: -**

- **Function:**

Add Pharmacist

- **Actors:**

Administrator

- **Priority:**

High

- **Description:**

When the administrator login, he can add the Pharmacist to the website database and give him an account to make the Pharmacist can do many functions.

- **Inputs:**

Admin should write first name, last name, age, id, username, and password in the right way and correct data to add successfully.

- **Outputs:**

The administrator adds Pharmacists to the system and makes accounts for the Pharmacists and gives them some permissions.

- **Requirements:**

The data about a required pharmacist will be added.

- **Pre-condition:**

The administrator had signed in to his profile (system), has permission and the Pharmacist give his data to the administrator.

- **Post-condition:**

The Pharmacist is added and has an account.

➤ **View Pharmacist: -**

- **Function:**

View Pharmacists

- **Actors:**
Administrator
- **Priority:**
Medium
- **Description:**
When the administrator login, he can add the Pharmacist to the website database and give him an account to make the Pharmacist can do many functions, and he can view Pharmacist details like " Viewing the personal information".
- **Inputs:**
Admin should write first name, last name, age, id, username, and password in the right way and correct data to add successfully; can view the details by clicking "view info".
- **Outputs:**
The administrator adds Pharmacists to the system and makes accounts for the Pharmacists and gives them some permissions, views Pharmacist details from the system.
- **Requirements:**
The data about a required Pharmacist will be added.
- **Pre-condition:**
The administrator had signed in to his profile (system), has permission and the Pharmacist give his data to the administrator.
- **Post-condition:**
The administrator views details about all the pharmacists.

➤ **Delete Pharmacist: -**

- **Function:**
Delete Pharmacist
- **Actors:**
Administrator
- **Priority:**
High
- **Description:**
When the administrator login, he can add the Pharmacist to the website database and give him an account to make the Pharmacist can do many functions, and he can delete the pharmacist.

- **Inputs:**
Admin should write first name, last name, age, id, username, and password in the right way and correct data to add successfully, and can delete the pharmacist by clicking “delete pharmacist”
- **Outputs:**
The administrator adds pharmacists to the system and makes accounts for the pharmacists and gives them some permissions, and deletes the pharmacist’s details from the system
- **Requirements:**
The data about a required Pharmacist will be added.
- **Pre-condition:**
The administrator had signed in to his profile (system), has permission and the pharmacist give his data to the administrator
- **Post-condition:**
The administrator deletes all the pharmacists.

➤ **Add Radiology Doctor: -**

- **Function:**
Add Radiology Doctor
- **Actors:**
Administrator
- **Priority:**
High
- **Description:**
When the administrator login, he can add the Radiology Doctor to the website database and give him an account to make the Radiology Doctor can do many functions.
- **Inputs:**
Admin should write first name, last name, age, id, username, and password in the right way and correct data to add successfully.
- **Outputs:**
The administrator adds Radiology Doctors to the system and makes accounts for the Radiology Doctors and gives them some permissions.
- **Requirements:**
The data about a required Radiology Doctor will be added.
- **Pre-condition:**
The administrator had signed in to his profile (system), has permission and the Radiology Doctor give his data to the administrator.

- **Post-condition:**
The Radiology Doctor is added and has an account.

➤ **View Radiology Doctor: -**

- **Function:**
View Radiology Doctor
- **Actors:**
Administrator
- **Priority:**
Medium
- **Description:**
When the administrator login, he can add the Radiology Doctor to the website database and give him an account to make the Radiology Doctor can do many functions, and he can view Radiology Doctor details like " Viewing the personal information".
- **Inputs:**
Admin should write first name, last name, age, id, username, and password in the right way and correct data to add successfully; can view the details by clicking "view info".
- **Outputs:**
The administrator adds Radiology Doctors to the system and makes accounts for the Radiology Doctors and gives them some permeations, views Radiology Doctors' details from the system.
- **Requirements:**
The data about a required Radiology Doctor will be added.
- **Pre-condition:**
The administrator had signed in to his profile (system), has permeation and the Radiology Doctor give his data to the administrator
- **Post-condition:**
The administrator views details about all the Radiology Doctors.

➤ **Delete Radiology Doctor: -**

- **Function:**
Delete Radiology Doctor
- **Actors:**
Administrator
- **Priority:**

High

- **Description:**

When the administrator login, he can add the Radiology Doctor to the website database and give him an account to make the Radiology Doctor can do many functions, and he can delete the Radiology Doctor.

- **Inputs:**

Admin should write first name, last name, age, id, username, and password in the right way and correct data to add successfully, and can delete the radiology doctor by clicking “delete radiology doctor”

- **Outputs:**

The administrator adds radiology doctors to the system and makes accounts for the radiology doctors and gives them some permissions, and deletes the radiology doctor's details from the system

- **Requirements:**

The data about a required Radiology Doctor will be added.

- **Pre-condition:**

The administrator had signed in to his profile (system), has permission and the radiology doctor give his data to the administrator.

- **Post-condition:**

The administrator deletes all the radiology doctors.

➤ **Add Accountant: -**

- **Function:**

Add Accountant

- **Actors:**

Administrator

- **Priority:**

High

- **Description:**

When the administrator login, he can add the Accountant to the website database and give him an account to make the Accountant can do many functions.

- **Inputs:**

Admin should write first name, last name, age, id, username, and password in the right way and correct data to add successfully.

- **Outputs:**

The administrator adds Accountants to the system and makes accounts for the Accountants and gives them some permissions.

- **Requirements:**
The data about a required Accountant will be added.
- **Pre-condition:**
The administrator had signed in to his profile (system), has permeation and the Accountant give his data to the administrator
- **Post-condition:**
The Accountant is added and has an account.

➤ **View Accountant: -**

- **Function:**
View Accountant
- **Actors:**
Administrator
- **Priority:**
Medium
- **Description:**

Patient logged in into his system and has permission to buy and view medicines.
- **Post-condition:**
Patient took the medicine he wanted.

➤ **View Specialization:**

- **Function:**
View specialization
- **Actors:**
Patient, Administrator
- **Priority:**
medium
- **Description:**
When user login, he can filter and view specialization details like “name”
- **Inputs:**
User should write specialization name in right way and correct data to be able to view the details and click “view info”
- **Outputs:**
User views specialization details from the system
- **Requirements:**
The data about required specialization that user wants to view
- **Pre-condition:**
User had login to his profile (system) and has permission

- **Post-condition:**
User view details about all filtered the specializations

➤ **Call Emergency:**

- **Function:**
Call emergency
- **Actors:**
Patient
- **Priority:**
High
- **Description:**
When user login, he can call emergency to help him
- **Inputs:**
User should write emergency number in right way to call it
- **Outputs:**
User is helped by emergency
- **Requirements:**
The number of emergency
- **Pre-condition:**
User had login to his profile (system) and has permission
- **Post-condition:**
User view number of emergency and call it

➤ **Use medical Insurance:**

- **Function:**
Use medical insurance
- **Actors:**
Patient
- **Priority:**
Medium
- **Description:**
When user login, he can use medical insurance to have a discount on price of medicines
- **Inputs:**
User should enter your medical insurance in right way
- **Outputs:**
User dispends the medicine from the system
- **Requirements:**

The data about required medical insurance that user wants to use

- **Pre-condition:**

- **Post-condition:**
User dispends the medicine from the system

➤ **Talk to chatbot:**

- **Function:**
Talk of chatbot
- **Actors:**
Patient
- **Priority:**
Medium
- **Description:**
When user login, he can use medical insurance to have a discount on price of medicines
- **Inputs:**
User should open chatbot to be guided
- **Outputs:**
User dispends the medicine from the system
- **Requirements:**
Open the chatbot in right way and has permission
- **Pre-condition:**
User had login to his profile (system) and has permission
- **Post-condition:**
User talk to chatbot and be guided by it

➤ **View medical Analysis**

- **Function:**
View medical analysis
- **Actors:**
Administrator
- **Priority:**
Medium
- **Description:**
When User login, he can view medical analysis details
- **Inputs:**

User should write medical analysis in right way and correct data to be able to view the details and click “view info”

- **Outputs:**
User views medical analysis details from the system
- **Requirements:**
The data about required medical analysis that user wants to view
- **Pre-condition:**
User had login into his profile (system) and has permission
- **Post-condition:**
User view details about all filtered the medical analysis

➤ **View X-rays**

- **Function:**
View x-rays
- **Actors:**
Administrator
- **Priority:**
Medium
- **Description:**
When User login, he can view x-rays details
- **Inputs:**
User should write x-rays in right way and correct data to be able to view the details and click “view info”
- **Outputs:**
User views x-rays details from the system
- **Requirements:**
The data about required x-rays that user wants to view
- **Pre-condition:**
User had login into his profile (system) and has permission
- **Post-condition:**
User view details about all filtered the x-rays

➤ **View Invoices:-**

- **Function:**
View invoices
- **Actors:**
Administrator

- **Priority:**
Medium
- **Description:**
When User login, he can view invoices details
- **Inputs:**
User should write invoices in right way and correct data to be able to view the details and click “view info”
- **Outputs:**
User views invoices details from the system
- **Requirements:**
The data about required invoices that user wants to view
- **Pre-condition:**
User had login into his profile (system) and has permission
- **Post-condition:**
User view details about all filtered the invoices

b. Non- Functional Requirements:

It specifies system/software properties (such as reliability and safety), and constraints on the services or functions offered by the system (such as timing constraints, response-time), or constraints on the development process.

➤ **Usability & Humanity.**

- The product shall be easy to use on the first attempt by a member of the public without training.
- **Intuitiveness:** the interface is easy to learn and navigate; buttons, headings, and help/error messages are simple to understand

➤ **Performance.**

- **Response Time:** The system provides a fast acknowledgment.
- **User-Interface:** The user interface acknowledges fast as we are using single page application.

➤ **Maintainability & Support.**

- Expected changes, and the time allowed to make them.
- **Back-Up:** The system offers efficiency for data backup.
- **Errors:** The system must be support error handling and will track every mistake as well as keep a log of it.

➤ **Security.**

- **Logon ID:** - Any user who uses the system shall have a Logon ID and Password (Authentication).
- **Modification:** - Any modification (insert, delete, update) for the Database shall be synchronized and only by the role that user has in the ward (Authorization).

➤ **Availability.**

- The system shall be available all the time.

➤ **Software Quality.**

- Good quality of the framework= produces robust, bug free software which contains all necessary requirements Customer satisfaction.

➤ **Reusability.**

- Is part of the code going to be used elsewhere= produces simple and independent code modules that can be reused.
